About the Rosenthal Symposium

Through the generosity of the Richard & Hinda Rosenthal Foundation, the National Academy of Medicine hosts an annual discussion series to bring greater attention to critical health policy issues facing our country today.

About the National Academy of Medicine

Founded in 1970 as the Institute of Medicine, the National Academy of Medicine (NAM) is one of three Academies that make up the National Academies of Sciences, Engineering, and Medicine (the National Academies) in the United States. Operating under the 1863 Congressional charter of the National Academy of Sciences, the National Academies are private, nonprofit institutions that work to provide objective advice on matters of science, technology, and health. National Academies studies are often congressionally mandated or commissioned by government agencies, and their recommendations have lasting impact on domestic and global policy.

The NAM has more than 2,000 U.S. and international members elected by their peers in recognition of exceptional achievement in health, medicine, and intersecting fields. Through a commitment to volunteer service, NAM members help guide the work and advance the mission of the NAM and the National Academies.
