

Join the Climate Collaborative as a Network Organization

The Action Collaborative on Decarbonizing the U.S. Health Sector (Climate Collaborative) is a public-private partnership of leaders from across the health sector committed to addressing the sector's environmental impact and strengthening its sustainability and resilience.

The Climate Collaborative is committed to galvanizing a movement within the health sector to mitigate and adapt to climate change, while centering and maximizing human health and equity. To extend the reach and impact of this work, the Collaborative encourages entities to join the movement and participate as Network Organizations.

Commit to addressing climate change with us.

This opportunity is open to private / for-profit, public (federal, state, or local government), and non-profit entities outside of the Collaborative's existing membership. By submitting an organizational commitment statement outlining your institution's current and/or future work in the Climate Collaborative's priority areas, you can join an expanding group of Network Organizations, and help inform the Climate Collaborative's work.

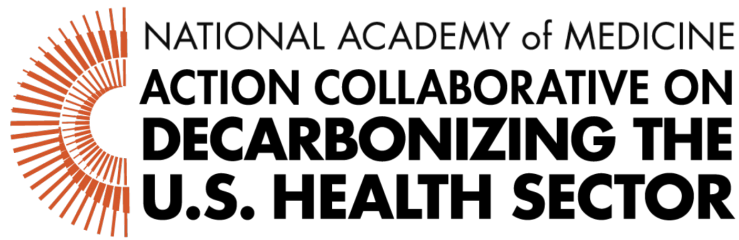

Network Organizations actively support and contribute to the work of the Climate Collaborative and:

- Are **listed on the Climate Collaborative's webpage**, along with an organizational "commitment statement" describing current and/or future work to address climate change, as well as a representative's contact information
- Receive regular updates on the work of the Climate Collaborative, including **priority invitations** to public meetings and advance notice of new resources and publications
- Have **opportunities to provide input** on Climate Collaborative activities
- Receive **communications tools** such as social media toolkits and infographics to disseminate to their own networks
- Receive **networking and information-sharing opportunities**

Lead. Commit. Act.
