National Academy of Medicine  
Action Collaborative on Decarbonization of U.S. Health Sector

### ei3 Commitment Statement

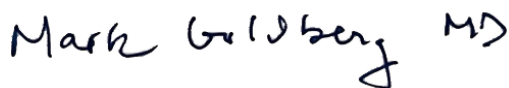

For over two decades, ei3 has been at the forefront of providing cutting-edge solutions to enhance the efficiency of industrial machinery operators across the globe. By leveraging advanced data science and artificial intelligence techniques, ei3 has enabled its clients to achieve significant reductions in energy consumption and carbon footprint. With ei3's solutions integrated into industrial machines from over 5,000 manufacturers across multiple industries, many of its technologies are also in use by healthcare industry suppliers. For example, Baxter benefits from energy usage reductions exceeding 10% by using machines with ei3 technology in their pharmaceutical manufacturing lines.

The benefits of ei3's technology go beyond manufacturing, and have been applied to other industries as well. For instance, Hilton Hotels uses ei3 to optimize energy consumption in their portfolio of 6,800 hotels worldwide, resulting in over \$1 billion USD savings, a 43% reduction in CO2 emissions, and a 62% reduction in waste over 10 years. The same technology can also be applied to hospital operations.

In addition to prioritizing environmental sustainability in our products and services, we are committed to sustainability in our office operations. In 2022, we made all of our global data center operations carbon neutral, providing clients with a "climate-neutral cloud." A full list of our 2022 ESG initiatives can be found at <https://ei3.com/publications/esg/>.

We believe our expertise and commitment to sustainability can make a tangible and significant impact in reducing carbon emissions in the healthcare industry. Our work and expertise align with the Climate Collaborative's Healthcare Supply Chain and Infrastructure priority area, and we are eager to collaborate with other organizations to achieve the goals of the NAM Action Collaborative for Decarbonizing the U.S. Health Care sector. Together, we can make a meaningful contribution to the fight against climate change and create a sustainable future for all.

Sincerely,

Mark Goldberg MD FACC  
ei3 Member of the Board
